

Hello Marnie,

Thanks for posting documents on the portal and we comment as follows..

Waste - we will ensure that the occupants of both of the flats subscribe to the chargeable city centre bag collection service, for residual waste and recycling. (The Salon has been part of this commercial service.)

Heritage Officer - we note the comments and we actively looking for alternative specification for the **windows** to the front elevation to meet the officer's requirements, and also provide the necessary decibel reduction.

I confirm that these windows will be white, with 'slimline' Double-glazed (DG) units with white perimeter seals/spacers to match the finish of the frames, to reduce their visibility. We will provide further details shortly.

The **shop front** will not change and drawings 1618CR - SN Existing Front Elevation and 1618CR - SN Proposed Front Elevation are identical except for the window numbers be marked on the latter drawing.

There is a proposed internal cycle store behind the left hand shop window which will constructed separated from the window frame, so there will be no change to the shopfront internally, nor externally.

I confirm that the existing separate (flats) front door is also in timber and there will be no change to this door, as shown on the drawings.

Both existing shutters, photo attached, will remain, but the shutter over the separate flats entrance door will be left secured in an open/up position, to ensure access and egress at all times.

I trust this answers the officers queries and if you or other officers require further information or a site visit please reach out.

Yours in co-operation.
