Further Proposed Works

I completely understand the need to protect the character of the conservation area, and I want to make sure anything I do is in keeping with the surroundings. With that in mind, I kindly ask if the council would consider allowing the fence to remain and propose the following:

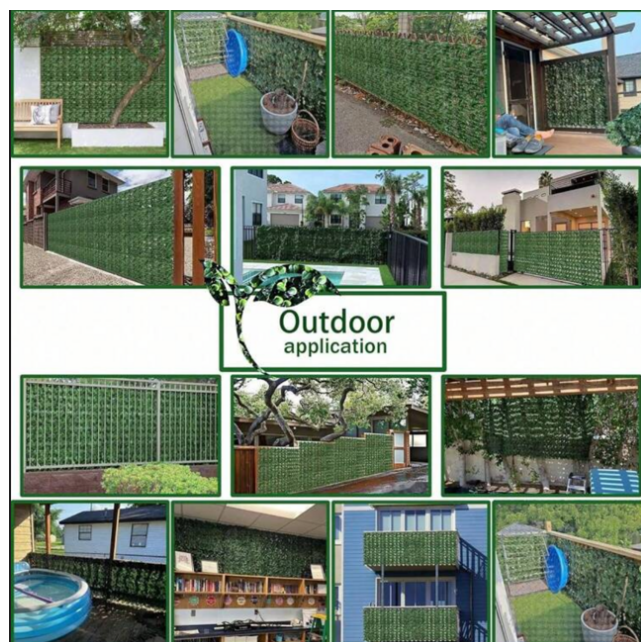

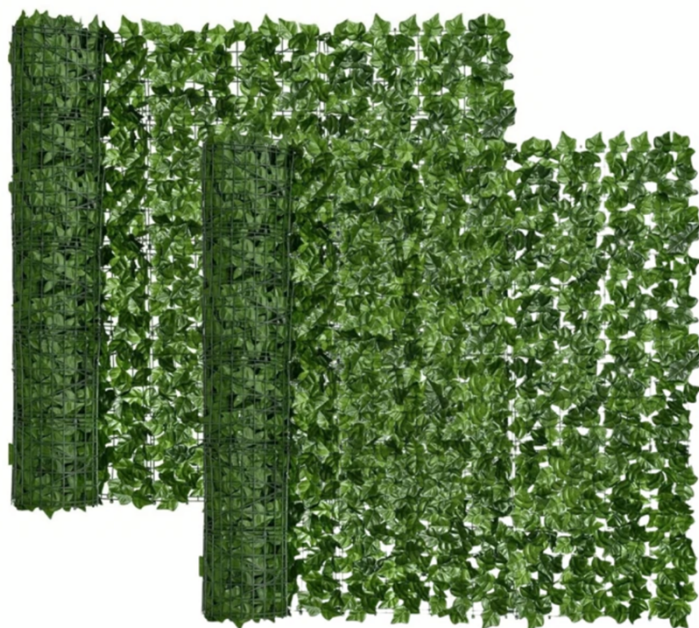

STEP ONE:

Repainting the fence in an appropriate traditional green colour commonly used within conservation areas, which would help it blend more naturally into the environment; and

STEP TWO:

Installing high-quality artificial hedging to create the appearance of natural greenery and soften the visual impact.

I believe that these steps would significantly improve the aesthetic of the boundary structure and maintain the character of the conservation area, while avoiding the need to remove the fence.

I would be grateful if you could confirm whether the Council would be willing to consider this proposal as an acceptable compromise.
