Subject: 13/1279 residential development at Glebelands

Hi Geraint,

Just to confirm that as the frontage of the development and the buffering of the River Usk SAC has not materially changed, we would like to maintain our objection. In its current form, the development is likely to negatively affect the River Usk SAC and its features (particularly migratory fish and otter) through disturbance during and after construction. There is also a risk of pollution (contaminants and/or sediment) entering the watercourse.

Please keep me informed of any new proposals.

Regards
Sorrel
