

Existing and Proposed Floor Plans

Ground floor, partial garage conversion. Prepared from measurements you provided (garage 4.9m x 2.4m; shared wall with kitchen 2.4m; kitchen/hallway block 4.3m x 2.8m; new partition approx. 2.5m from the front).

These are indicative sketches to support your planning application — clear enough to show the proposal, but not a substitute for a measured survey. If your council or a draughtsperson needs fully scaled, dimensioned drawings, these can be used as a basis.

Existing Ground Floor Plan

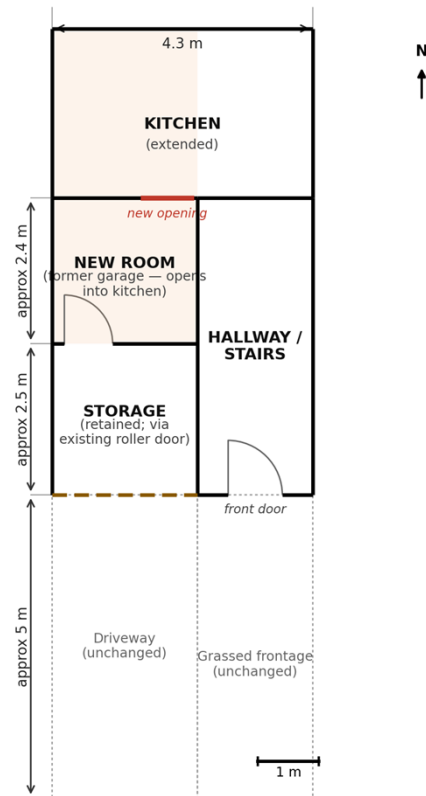

Scale approx. 1:100 (A4) — dimensions in metres

Indicative sketch prepared from client-supplied measurements — not a measured survey. Verify all dimensions on site before submission.

Existing — garage in storage use, no internal connection to the house.

Proposed Ground Floor Plan

Scale approx. 1:100 (A4) — dimensions in metres

Indicative sketch prepared from client-supplied measurements — not a measured survey. Verify all dimensions on site before submission.

Proposed — front section of garage retained as storage (unchanged access via existing roller door); rear section opened into the kitchen. No external changes.

Note: the exact position of the new doorway between the new room and the retained storage area can be adjusted to suit your kitchen unit layout — it's shown here on the left simply to keep the maximum run of unbroken wall free for units. Wall thicknesses and the driveway/frontage outlines are schematic rather than surveyed.
