

## Appendix E: Soilsapes Map

# Soilsapes Viewer Report

National Soil Resources Institute

Cranfield  
UNIVERSITY

### SELECTED SOILSCAPE:

Freely draining slightly acid loamy soils

### HABITATS:

Neutral and acid pastures and deciduous woodlands; acid communities such as bracken and gorse in the uplands

### LANDCOVER:

Arable and grassland

### DRAINAGE:

Freely draining

### FERTILITY:

Low

### TEXTURE:

Loamy

### COVERAGE:

England: 15.5%

Wales: 24.4%

E&W: 16.7%

Soilsapes is a 1:250,000 scale, simplified soils dataset covering England and Wales. It was created from the more detailed National Soil Map (NATMAPvector) with the purpose of effectively communicating a general understanding of the variations which occur between soil types, and how soils effect the environment.
