

Green Infrastructure Statement

76 Hillview Crescent, Newport

The proposal is to enlarge the existing garage slightly and add a timber fence above the existing low brick boundary wall, together with a gate.

The garage works are located on existing hard surfacing. There is currently no planting within the area affected by the works, so no greenery will be removed. The garage gutter is expected to remain at the same end of the building, subject to confirmation as the design develops.

The client would welcome planting in the front garden and has previously made efforts to establish it. Previous attempts have been unsuccessful because plants in this location have been damaged.

The proposed fence and gate should help protect the garden, making it easier to establish planting in the future.
