South Elevation

Note

Manure Management Plan

The manure which is produced will be cleaned out of the stables on a regular daily basis by hand and taken to the muck heap in an adjacent field and subsequently spread and harrowed into the fields or dug into the landscape area on the site as fertiliser.

Any excess manure will be collected by an appropriate waste disposal company or local farmer and removed from the site on a fortnightly basis and any vehicle used for this purpose will be covered or sheeted when transporting manure to minimise nuisance and annoyance.

Any waste transfer receipts will be retained for a period of 12 months and be available on written request. SL Recycling Pontypool operate a facility locally

The muck heap will to located on the ground a sufficient distance away from the stables and will be inspected on a daily basis by the owner who will assess whether the muck is required to be removed from the site due to any excessive odour, flies etc. and if removal this will be arranged for the earliest day possible by the Waste Disposal Company or farm.
